

FSE - fork hydraulic kit

Complete fork cap machined from Aluminium billet with spring preloading adjustment unit. All with anodic oxidation surface treatment.

Pre-assembled complete piston set, with dedicated shims pack for the compression and rebound adjustment (the fork kit does not require modification on the original fork).

Fork kit supplied with a bottle of specific fluid (Motorex Fork SAE 10).

Linear spring in Cr-Mn alloy Steel with cathodic surface treatment, available in different rates, dedicated for the different bike models and the driver weight.

Light alloy spacer with anodic oxidation surface treatment, available in different lengths, to fit correctly on the different front forks.
